

```
*****
* Hogan Configfile README *
*****
```

This document is basically a catch-all for general information about the Property File handle project(Configfile). It is anticipated that this document will be updated from time to time with new information.

As a developer, we all need property to per-define some variables and we can use it at the runtime. after some experiences in java, i get some idea to make it be smart like below, the standard file that show all features of this project.

```
#####
#hello, everyone
#this is a test configure file
#that show you all features
```

```
[Default]
Name : Hogan ;测试
From=China
```

```
[Test]
Empty = ;nothing
Ref = %(name)% Hu ;nested variable test
Title= Coder
What= Hi, [%(empty)%(Ref)%] , %(test)% ;comments
      Great job! ;another test for comments
Test = i like the project. #this for comments test
Enable = ON
```

```
#####
and the way to use like below java class:
```

```
#####
public static void main(String[] args) {
    ConfigFile._IMP().loadCFG("/tmp/test.ini");
    System.out.println(ConfigFile._IMP().getString("Test", "What"));
    System.out.println("empty float :" + ConfigFile._IMP().getFloat("Test", "Empty"));
    System.out.println("empty bool :" + ConfigFile._IMP().getBool("Test", "Empty"));
    System.out.println("bool-marked Enable :" + ConfigFile._IMP().getBool("Test", "Enable"));
}
#####
```

```
and the result like below:
```

```
#####
Hi, [Hogan Hu] , i like the project.
Great job!
empty float :0.0
```

empty bool :false

bool-marked Enable :true

#####

I think it's clear. and if you any concern, please let me know. and you can contact me with below infos:

QQ : 82425753

email: jie.hu.china@gmail.com

Hope you like it and helps!

:)
